Session 4 Tasks

Please only use external styles for this task.
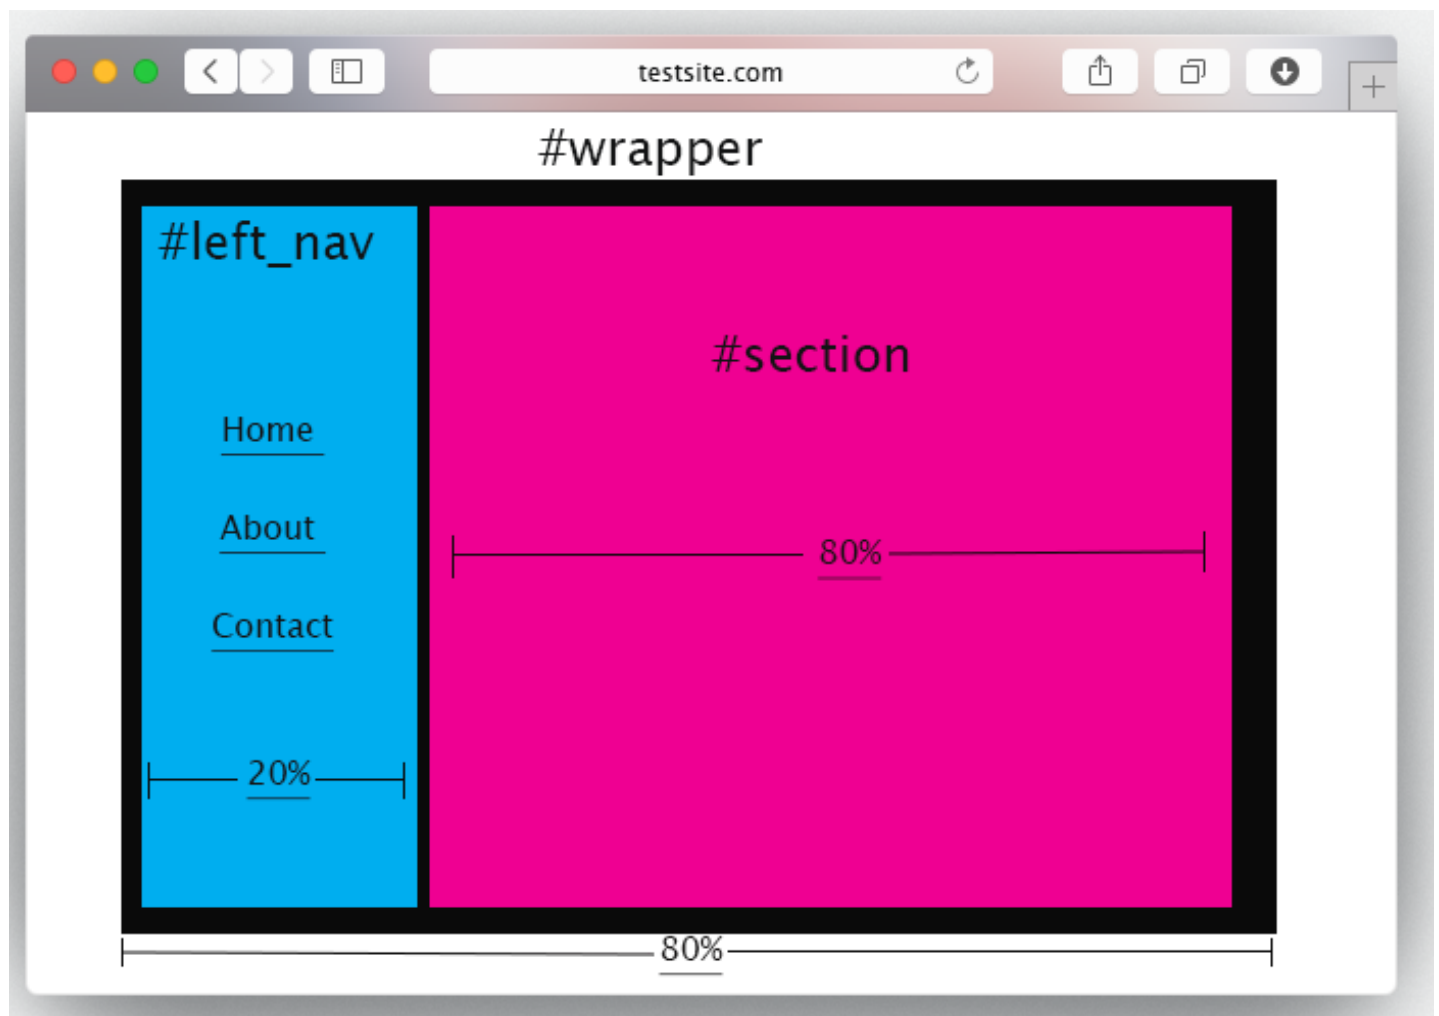

Task 1 - Style up your week one page

Set up

- Inside your `internet_tech` directory create a `session4` folder.
- Copy your webpage from **session1** into the `session4` folder you just created.
- Create a new style sheet and `<link>` it into your webpage. It's a good idea to place the style sheet in a new folder e.g. `css`.

Let's make your page look a little but more presentable

Please go wild and style the page as much as you like, but as a minimum I want to see you complete the below tasks. Once done your page should resemble the layout below:

- Section up your site using a minimum of 3 `<div>'s` #left_nav `,` #section `and` #wrapper` which holds all the content.
- To start with give `#left_nav` a width of **20%** and `#section` a width of **80%**.
- Give `#wrapper` a width of **80%** and centre align it using `#wrapper {margin: 0 auto;}`
- Add a different `background-color` to `#left_nav` and `#section`.
- Use `float` to position `#left_nav` and `#section` side by side, as per the mock up above.
- Use a `<ul>...</ul>` to create a basic navigation list in `#left_nav`. Have at least 3 links, but you don't need to create the corresponding pages. Here's how to create a placeholder link: `<a href="#"> Home </a>`.
- Resize the image and centre align it.
- Remove the bullet points from the `<ul>` nav list **(Optional)**.

Task 2 - Update your learning log

Don't forget once you're done update your learning_log.html and link to your new page in the evidence section of the table.
